

Jal - Clean Drinking Water

Frontier Alloy Steels Ltd

Frontier Alloy Steels Limited considers the social and environmental alongside the economic aspects of any business idea.

Our corporate social responsibility is no longer defined as charity, but by its overall involvement in activities that improve the quality of people's lives. Subsequently, we realized that our niche for innovation would do betterment in the Society.

Consequently in the year 2017, Frontier Alloy joined hands with the IIT-Kanpur for promotion of Technology Research and Development. We provided IIT-Kanpur with a sum of Rs. 19,12,000 towards development promotion of education and research during 2018-19 under our 3 year program MOU program.

Our collaboration with IIT-Kanpur resulted in the development of a **non-electric water filter**. Drinking Water is the basic necessity for every individual, but taking a view at the enormous water pollution, all the citizens are not blessed with clean drinking water. Thus we installed a Water plant in Aagain, Unnao District which is today providing the villagers with good quality drinking water which is free from all diseases with no electricity consumption and minimal wastage of water.
